

Real-Time Financial Visibility Across Your Entire Healthcare Organization

If you are like most healthcare finance leaders, you make critical decisions based on information that is weeks or even months old. In an industry moving toward value-based care, facing constant regulatory changes, and operating under intense margin pressure, that delay could cost your organization millions in missed opportunities and undetected problems.

Traditional accounting systems require extensive manual processes, force finance teams to spend days closing books, and deliver reports that are outdated before they reach decision-makers. Your healthcare organization deserves better.

Real-Time Access to Financial Data from Anywhere

Sage Intacct is a true cloud financial management solution that delivers real-time visibility across your entire healthcare organization from any location. Whether you are at a conference, in a board meeting, or working remotely, you can log in from any device and instantly access current financial performance, operational metrics, and statistical data in one comprehensive view.

No more waiting for month-end closes or requesting custom reports from your finance team. Current data is always available when decisions need to be made. This immediacy transforms how healthcare executives manage their organizations, enabling proactive rather than reactive leadership.

Simple Consolidations Across Multiple Entities

Whether you manage a single practice or a multi-entity network with dozens of locations, Sage Intacct consolidates your financials in minutes, not days. Push-button consolidations

aggregate transactions across all entities while maintaining the granular detail you need for location-level decisions.

As you add locations, acquire practices, or expand service lines, your financial management system scales effortlessly. Each entity maintains its own books while rolling up seamlessly into consolidated reports. Eliminate the spreadsheets, manual reconciliations, and data integrity problems that plague traditional consolidation processes.

Integration Clinical Systems for Complete Operational Insight

Sage Intacct integrates seamlessly with electronic medical records systems, practice management software, and other clinical applications. Clinical and financial data merge into powerful insights about the true cost of delivering care, the profitability of different service lines, and the operational efficiency of your facilities.

This integration eliminates duplicate data entry, reduces errors, and provides complete operational visibility. Finance teams transition from being scorekeepers of historical data to strategic partners providing forward-looking analysis and planning.

Endorsed by the Organizations That Matter

Sage Intacct is the only financial management solution endorsed by the American Institute of Certified Public Accountants and peer-reviewed by the Healthcare Financial Management Association. These endorsements reflect our commitment to meeting the unique needs of healthcare organizations.

Healthcare organizations using Sage Intacct report dramatic improvements in close times, decision-making speed, and financial team productivity. They spend less time gathering historical data and more time on strategic planning, forecasting, and proactive management.
